

About This Study

COVID-19 has become a global health threat, and the need for a safe and effective vaccine is critical. There is currently no US Food and Drug Administration (FDA)-approved vaccine to prevent COVID-19.

This COVID-19 clinical trial is testing whether this vaccine will prevent COVID-19. It will compare this vaccine with a placebo, a substance that contains no active medication.

Participants who qualify for the study will receive:

- Study-related medical tests throughout the study
- The study vaccine or placebo
- Study-related monitoring of health and follow-up care

By participating in this study, you will make an important contribution to advance COVID-19 research. Speak with a study team member to learn more today!

Thank you for taking the time to consider joining this COVID-19 vaccine clinical trial.

YOU CAN HELP WITH THIS
VACCINE CLINICAL TRIAL

Who Can Participate

You may be eligible to participate in this COVID-19 vaccine clinical trial if you:

- Are an adult 18 years or older

We are specifically interested in those who:

- Represent a racial and ethnic group that has been greatly impacted by the pandemic (such as African American, Latinx, Native American, or Asian American)
- Have an underlying medical condition (such as diabetes or obesity)
- Have a high risk of exposure through work (such as first responder, healthcare professional, or delivery person)
- Live or work in an elder-care facility
- Are retired or active military

Other criteria will need to be met to confirm your eligibility for this study.

If you qualify and choose to join the study, you may be compensated for your participation.

What to Expect

Participation for this study is divided into 3 periods:

- **Screening:** The study team will determine if you are eligible to take part in the study
- **Vaccine:** All participants will get 2 injections of the study vaccine or placebo on the first day and again 3 weeks later
- **Follow-up:** The study team will monitor your health until 2 years after the last injection

You will be **randomly assigned** (by chance) to get either the study vaccine or placebo. Neither you nor the study doctor will know which group you are in or which injection you receive. Each participant will receive 2 injections.

Participants who receive the placebo vaccine may be eligible to receive the investigational vaccine after completion of the study.

Active Self-Monitoring

Participants will monitor their body temperature daily and look for symptoms of COVID-19 infection. Participants will report this information on an electronic questionnaire.

About Clinical Trials

A clinical trial, also called a clinical study, is carefully supervised research that is done before a study drug is approved and made available to the public.

- Clinical trials follow specific laws to protect the rights, safety, well-being, and confidentiality of study participants
- The results help government agencies like the US FDA determine if a product is safe and should be made available to the public
- Clinical trials are used to develop new prevention methods and medical treatments

Participating in a clinical trial is completely voluntary.

Taking part in the study will provide information about the study vaccine. If the results show that the study vaccine prevents COVID-19, this vaccine could become available for others, potentially protecting them from COVID-19 now and in the future.
